

The Eastern Red Cedar Story

(MANAGEMENT AND MARKETS FOR RED CEDAR TREES)

WORKSHOP AND TOUR

Tuesday, June 26, 2018

8:30 A.M. TO 4:00 P.M.

Prairie Heritage Center

4931 Yellow Avenue

Peterson, IA 51047

ABOUT THE WORKSHOP

Have you ever wondered whether Red Cedar is a menace or a friend? Considered a native aggressive species, Red Cedar can pose many management challenges such as invasion of the landscape. However, it has the potential to provide many economic benefits that can include fuel to fly an airplane, and perhaps many chemical elements that can cure or treat some diseases. Red Cedars can be managed for wildlife too.

Come and join us at this workshop and field tour to explore how to balance the management of Red Cedar for environmental and economic benefits!

TOPICS

- ◆ Carbon sequestration and soil health potential
- ◆ The Good, the Bad, and the Ugly - Red Cedar and wildlife
- ◆ Laboratory evaluation of biofuel production
- ◆ Screening phytochemicals in Red Cedar for development of potential entrepreneurial opportunities
- ◆ Management considerations of Red Cedar for Agroforestry Systems
- ◆ Eco-Cedar 1.0: a visual and economic decision support tool for farm and rangeland managers

We will also tour several Red Cedar sites with different management needs.

This research was supported by funding from the North Central Regional Sun Grant Center at South Dakota State University through a grant provided by the US Department of Agriculture under award number 2014-38502-22598

REGISTRATION INFORMATION

Registration: \$25 (includes lunch) or \$30 after June 21, 2018
